RE: Drifting Exposure

Enclosed are the results of analyses for samples received by the laboratory on 02-Feb-2016. The samples associated with this report will be held for 90 days from the date of this report. The raw data associated with this report will be held for 5 years from the date of this report. If you need us to hold onto the samples or the data longer than these specified times, you will need to notify us in writing at least 30 days before the expiration dates. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dale Rosado, Ph. D.
Chemist

Appendix C4: DGT Chemistry

ORANGE CELLS ARE FOR INPUTING PARAMETERS

Step 1: Enter the deployment and recovery date and time - this will auto-calculate the exposure period in seconds. (t)

Step 2: Enter the average temperature during the deployment in whole #'s - this will determine the Diffusion Coefficient for each metal.

Step 3: Enter the Volume of HNO3 added to resin gel during acidification step. (VHNO3)

Step 4: Enter the Sample IDs and Concentration of metal as measured by ICP-MS in the nitric acid elution. (Ce)

Step 5. Enter the thickness of the diffusive gel layer. (Δg)

Step 6. Enter the exposure area as found on the container in which DGTs are delivered in. (A)

The Green Highlighted cells are the final DGT concentration for each metal in $\mu\text{g/L}$ (there is a 1000x multiplier to covert from $\mu\text{g/ml}$ to $\mu\text{g/L}$).
